Quiz Instructions

Question 1

4 pts

Define the transition function for a DFA above with two states that uses the alphabet $\{0,1\}$ and accepts bit strings that represent *even binary numbers*. Only two states are needed. Fill in the blanks for the transition function below. (Hint: what symbol do even binary numbers end with?) Don't use subscripts; Just enter q0 or q1.

$\delta(q_0, 0) =$

$\delta(q_0, 1) =$

$\delta(q_1, 0) =$

$\delta(q_1, 1) =$

Question 2**6 pts**

Fill in the transition table for the DFA below.

	<i>a</i>	<i>b</i>
q0		
q1		
+ q2		

Question 3**6 pts**

Fill in the table below with the output states for a DFA that accepts strings that start with a *b* and end with an *a*. (See the diagram above.)

	<i>a</i>	<i>b</i>
q0		
q1		
+ q2		
q3		

Question 4

3 pts

Which states would be accepting when forming the **complement** of the DFA in the previous question (#3)?

☐ q0☐ q1☐ q2☐ q3

Question 5

2 pts

What language does the DFA below accept?
